[http://www.wrh.noaa.gov/sto/brief/wwa\\_bc\\_cal.php](http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php)

# WEATHER SYNOPSIS BY REGION

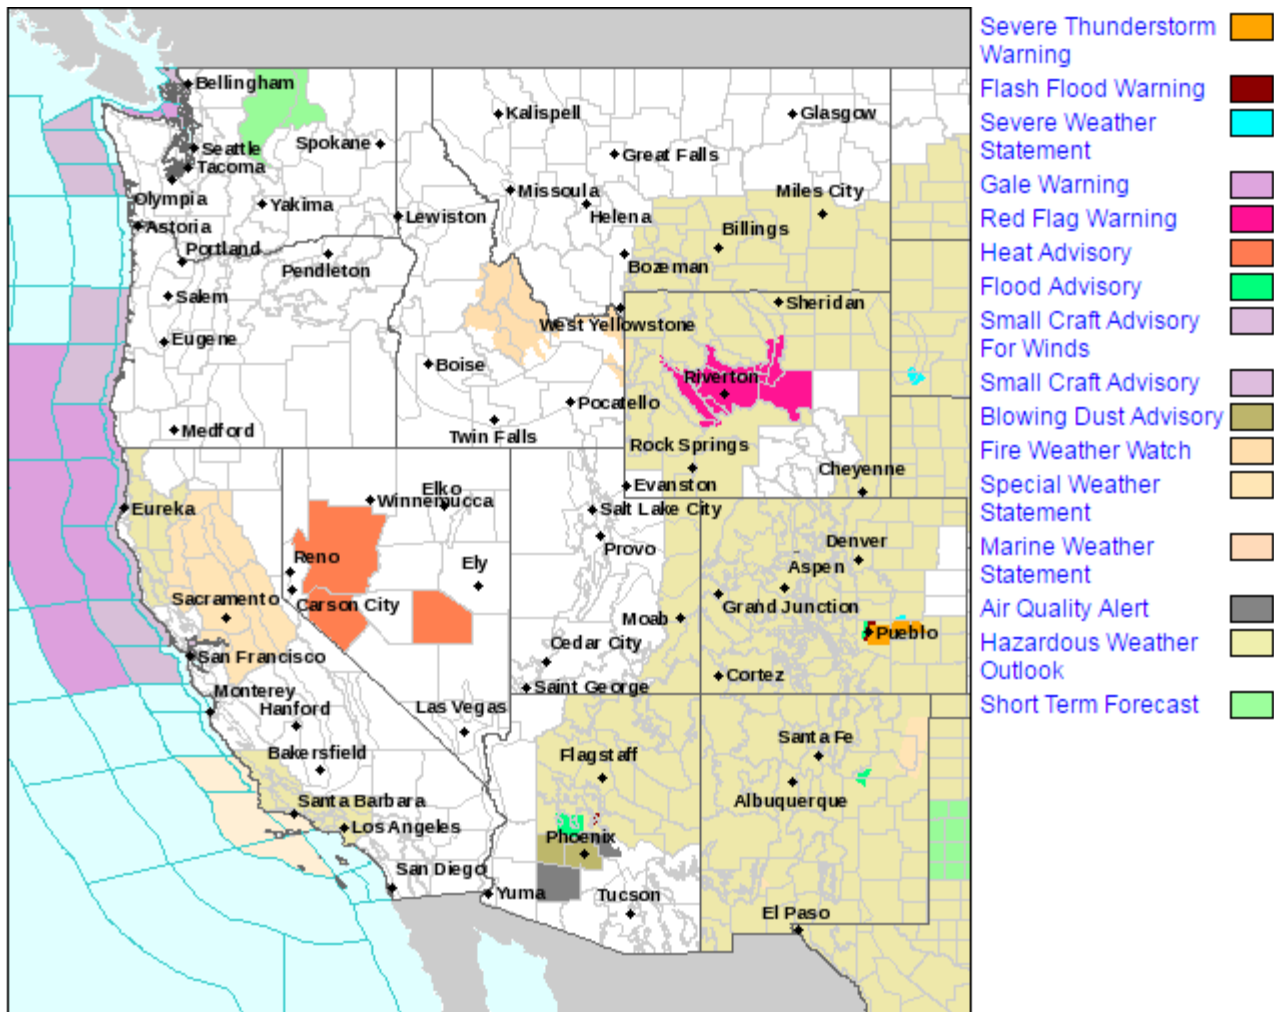

## **NORTHERN CALIFORNIA**

A strong high pressure ridge over Southern California is producing very hot and dry conditions there. The warming trend throughout Northern California is less extreme due to a weakening low pressure trough overhead. Temperatures in Northern California will be around 3-6 degrees above normal today, but increase to 8-12 degrees above normal Tuesday through Friday as the ridge moves northward over Central California and the Great Basin. Inland afternoon humidity will be near 5-15% with overnight recovery only to 20-30% in many locations. A typical mid summer diurnal wind pattern will be in place all week - light downslope/down-valley winds during nights and mornings and light upslope/up-valley winds in afternoons. The marine layer will be shallow and only affect areas near the immediate coast. Some computer forecast models are hinting at a low pressure trough returning to the region late in the week or over next weekend, and the potential that limited monsoon moisture may be drawn northward into the region as early as Thursday evening, producing isolated dry thunderstorms over the higher terrain. The most likely areas for lightning would be the Northern Sierra late Thursday; and the Northwestern Mountain(NC04), Northeast California (NC06), Far Eastside (NC08), and NC07 Friday into early Saturday. However, computer models are inconsistent on this potential lightning threat and some models show lightning not reaching Northern California at all, so confidence remains low at this point.

## **SOUTHERN CALIFORNIA**

Southeast flow aloft around strong high pressure centered over the Four Corners Area will bring isolated showers and thunderstorms to the mountains and deserts of Southern California south and east of the I-15 corridor this afternoon. The high pressure area will shift west to Southern Nevada Tuesday through Friday which will cause isolated afternoon showers and thunderstorms to form only near the Colorado River. Isolated afternoon showers and thunderstorms will move back west to cover the mountains and deserts of Southern California east of the Cajon Pass this weekend. There will be little change in temperature today and then temperatures will warm a couple degrees Tuesday through Friday. Maximum temperatures will be in the mid 80s to mid 90s across the mountains and mid 90s to 105 in the valleys today. Temperatures will cool a little this weekend as a trough moves inland across the Pacific Northwest. Minimum humidity will be mainly in the single digits and teens across Central California and between 15% and 25% across Southern California through this weekend. Northwest to north winds of 15 to 25 mph with gusts to 40 mph will surface across the mountains of Southern California from the Santa Ynez Range east to the I-5 Corridor as well as across the Kern County Mountains late Wednesday afternoon through early Friday morning. There will be southwest to west afternoon winds of 15 to 25 mph across the desert passes Friday through this weekend.
